CARRER OBJECTIVE

Computer Science and Engineering graduate with a solid foundation in coding and software development seeking a software engineering role where I can create efficient, scalable solutions and driven meaningful contributions to team success.

EDUCATION

B.E in Computer Science and Engineering **2023 – 2027**

SDM Institute of Technology, Ujire

PCMB in Science **2021 – 2023**

Konnur Science PU College, Yallatti

SKILLS

Programming Languages: Python, Java, C, JavaScript

Database: MySQL, MongoDB

Fronted: HTML, CSS, JavaScript, React.js

Backend: Python, Flask, Node.js

Tools/Technologies: Git, GitHub, VS Code, Jupyter Notebook

Core Concepts: Data Structures and Algorithms, Object-Oriented Programming (OOP), Operating System, Computer Networks, Cloud Computing, Blockchain Technology, Machine Learning, Discrete Mathematical Structures, Database Management Systems, Data Visualization, Artificial Intelligence.

PROJECTS

College Timetable Generator **Sep 2025 – Nov 2025**

Tech stack: Python, HTML, CSS, JavaScript, Flask

- Designed a web-based System to automatically create optimized academic schedules for colleges or educational institutions.
- The system eliminates the manual process of timetable preparation by efficiently allocating subjects, faculty members, classrooms, and time slots while satisfying institutional constraints.
- Timetable creation is traditionally a complex and time-consuming task that often leads to scheduling conflicts such as overlapping classes, faculty clashes, or inefficient room utilization.
- This project addresses these challenges by using automated scheduling algorithms to generate accurate and conflict-free timetables.

Construction Safety Monitor **Feb 2025 – Mar 2025**

Tech stack: HTML, CSS, JavaScript

- Smart Site is a real-time safety monitoring system designed for construction sites.
- It helps ensure worker well-being by continuously tracking environmental and climate conditions such as temperature, humidity, air quality, UV index, and wind speed.
- Based on these readings, Smart Site automatically determines the current safety status and displays alerts when conditions may pose risks.

- Integrated Open Weather API by securely adding and configuring the API key in JavaScript to fetch real-time environmental and climate conditions (temperature, humidity, air quality, UV index, and wind speed), enabling Smart Site to automatically determine safety status and display risk alerts.

CERTIFICTES AND ACHIEVEMENTS

- **Python Certification – HackerRank (2025):** Learned python essential concepts like data types, control structures, functions, basic data structure, string manipulation, error handling and fundamental problem-solving skills.
- **ANVESHANA'25 Prototype Competition Participant Certificate (2025):** Participated in ANVESHANA'25 -National-level prototype competition held by Institution's Innovation Council (IIC) -BMS Institute of Technology and Management, Bengaluru.
- **Top Performer at Mini-Anveshana'25 Idea Contest (2025):** Participated in innovation-driven competition organized by Aagastya International Foundation at SDM Institute of Technology Ujire and recognised as Top Performer in the Idea Presentation Contest.
- **Google Arcade Program (2026):** Completed 40+ labs and Earned 7 Google skill Badges.

AREAS OF INTEREST

- Cloud services, Data Science, Artificial Intelligence and Machine Learning, Full Stack Web Development.
